Donation is not required by any means, so please enjoy your stay. This means that you cannot reply to this topic. My own feeling is if the tripod legs are wood and varnished not painted it is probably a classic of some sort. It causes one to pause when realizing the neat looking car, scope, or whatever at the mall collector display is one that was new when I was in high school! Interesting than my model 785700 is Towa with circle T. The one on goodwill shows no symbol. I think theres a Sears in that focal length that is also called Discoverer. I also noticed that the one youre considering has metal focusing knobs and a finder, a good feature and is an earlier version of mine. For the right price the Goodwill scope has a nice grab and go mount and the scope aint half bad either. Sadly, the Goodwill price has already exceeded what I would consider the right price. IIRC this one was 10 bucks. Your scope does appear to be earlier with the metal focus wheels and more natural toned wood tripod. Look for a Japanese symbol when you get it. There may be one on the focuser label that does not show. They do usually have good optics. Give a holler about your first light. Even with more modern eps, I usually take a gander with original eyepieces when viewing with a classic, at least once in a session. It gives me the grins.

Neil It has the prism erector assy and all other parts and isnt damaged either. It has an AZ mount with varnished wood tripod and it performs well a Circle T model. Its similar in performance to my Meade ETX60AT. The Sky Chief II has more CA compared to the ETX60AT. While being decent performers, these Bushnells and similar brands like Jason were popular department store scopes. The Sears 6345 comes to mind! There was time when better dept. SLR cameras. Now even a big box store like Best Buy carries the models that are point of sale for the average

consumer. Cloudy, damp, and cool weather here. Scope is a 60x910mm per the label. Tube has several scratches but expect that after being handled by who knows how many people in the donation process. Only symbol is something that looks like a raindrop in a box. Wood legs in good condition. Nice smooth focuser. The finderscope is nice, full aperture and probably 6x30. Why not post a photo of the declination assembly, or what's left of it. BTW, I know what you mean about the price of gasoline. Now I suppose some classic 1.25 oculars are in order. Recovering from the flu now and a bit restless but not risking going outside in the cold, damp night to stargaze. Based on Friday afternoons terrestrial views in the warm sunshine I expect the Sky Chief to do well. There was none of that nasty purple fringing around far distant tree branches as seen on cheap refractors, although those scopes do make the night sky more colorful. I read on another CN thread some time back that the Huygenian design actually compensates for CA in refractors, although from your description of the view on Friday, it might not be needed. Anyway, best of luck with the scope, and feel better! Does or does not use of a Barlow affect CA? Donation is not required by any means, so please enjoy your stay. While this manual is intended to assist you in the setup and basic use of this instrument, it does not cover everything you might like to know about astronomy. Although.

Declination Lock Knob 11. Counterweight Shaft 12. Locate the preassembled Tripod and Equatorial Mount. Remove attachment bolts at top of Equatorial Mount. Attach Telescope Main Tube to the top of the Equatorial Mount. Secure in place by reinserting bolts through Equatorial Mount into base plate. Telescope models will vary in focal length. Included with this telescope is a Barlow lens. Barlow lenses are used to double or triple the power of your telescope. Place your Barlow between the focusing tube and the eyepiece. Provided you did a reasonable job aligning the finderscope, a quick look through the main telescope tube at low power should reveal the same image. The Lifetime

Limited Warranty is an expression of our confidence in the materials and mechanical workmanship of our products and is your assurance of a lifetime of dependable service. Based on Isaac Newton's original design, Newtonian reflectors use a twomirror optical system to gather light and direct it to a magnifying eyepiece. Bushnell includes a tripod, finder scope, two magnifying eyepieces and a Barlow lens with its reflector telescopes. The lowpower eyepiece works best when observing large, extended objects, such as star clusters and galaxies. Use the highpower eyepiece when observing the moon and planets. Lay the tripod on the ground. Loosen the thumb screws on each leg, and extend all three legs to a comfortable viewing height. Tighten the thumb screws on each leg after verifying that you extended each leg the same height. Stand the tripod upright on a flat, level surface. Loosen the retaining clamps on the tripod mount. Attach the telescope to the mount and tighten the retaining clamps to secure it in place. Attach the finder scope to the telescope tube. Insert the finder into the finder scope mounting bracket and tighten the thumb screws. Aim the telescope at a bright object, such as the moon or a star. Look through the finder scope and adjust

the height and direction of the telescope to center the object into the finder scope. Insert the lowpower eyepiece into the telescope's focuser. Look through the eyepiece. Turn the focus knob on the focuser to sharpen the image. Align the finder scope if the object is centered in the finder scope but not the telescope's eyepiece. Center the object in the eyepiece and adjust the finder scopes adjustment screw to center the object in the finder scope's crosshairs. Remove the lowpower eyepiece and insert the highpower eyepiece to increase the magnifying power of the telescope. Insert the Barlow lens between the focuser and the eyepiece to further multiply the magnifying power.

Things Youll Need Bushnell reflector telescope Tripod Finder scope Magnifying eyepieces Barlow lens Tips The images in a reflector telescope appear upside down and backward because of the mirrors used in the Newtonian design. Pick an observing location away from porch lights, street lights and other forms of local light pollution. Rural areas offer the best observing sites because of their distance from the light domes generated by the combined light pollution of a town or city. Warnings Observing the sun through a telescope will seriously damage your vision. If you live in the United States your repair should be sent to After reading your letter a technician will evaluate your unit to determine what repairs are needed and whether or not warranty coverage will be applicable. It is our option to repair or replace your unit. If your unit is NOT covered under

warranty an estimate for repair or replacement will be mailed to you. You will have 20 days to respond, either accepting or declining the recommendation. If you accept the recommendation for repair or replacement you will need to provide payment. That can be in the form of a check, money order, or if you prefer, by MasterCard or VISA. If the repair or replacement is covered under warranty, you will receive no additional correspondence. Your repaired unit or a comparable replacement of equal value and function will be shipped to you via UPS within the normal turnaround time which may vary seasonally. Our payment security system encrypts your information during transmission. We don't share your credit card details with thirdparty sellers, and we don't sell your information to others. Please try again. Please try again. Show details Register a free business account Not for children under 3 yrs. Please try your search again later. Height 182 cm Lightweight and Compact for Travel with 3way Swivel Head and 2 Quick Release Plates for Canon Nikon DSLR Video Shooting Black The legs are individually adjustable, so you can find the perfect height for your viewing. Other features include three padded foam leg cushions that add comfort and protection in extreme hot or cold conditions, a sliding center column with a tension control, rubber leg tips, and a rugged corrosionresistant finish. The companys guiding principle is to provide the highest quality, most reliable, and most affordable sports optics products on the market. Bushnell product lines enhance the enjoyment of every outdoor pursuit, including nature study, hunting, fishing, birding, and stargazing.

Indoors, the companys binoculars bring the audience closer to the action in fastmoving sports or the fine arts at theaters and concerts. Additional shipping charges will not apply. To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. Please try again later. Stewcruiser 5.0 out of 5 stars My first priority was stability, and a fluid pan head, easy to adjust settings. So far, this tripod has met my expectations in that it IS stable for my 5 lb. The pictures I have attached show the adjustment knobs and the leg adjustments. The leg adjustments although not quick release suit my needs as I do not move it very far as I am watching wildlife. The center column nut is impressive and holds the column tightly. The pan adjustment works well without much wobble. The head mount is not quick release but again this is acceptable for my more stable needs. Overall, I believe that this tripod is a good value and can be used for the heavier scopes and cameras. If you are going to use it for a camera, its probably not a big deal, but I bought it with a birding scope, so it would be a lot handier if the legs were quickrelease instead of standard wing nuts. If youre getting it for a birding scope, find something with legs that are quickrelease. This tripod blows them all away. Everywhere the cheap tripods were lacking this one is perfectly engineered. Its a little heavy and the legs take several seconds longer to fiddle with but the materials and build quality gives a stable platform to my 3 lb spotting scope that I have been searching for without breaking the bank. It is comprised of almost all metal.

Even when the binoculars are pointed skyward at a 4560 degree angle, the eyepieces are at a reasonably comfortable height, so I dont have to bend down too much while trying to look upward. The panhead moves smoothly and locks securely, easily holding my Pentax PCF 12x50 binoculars with quick release mount about 3.5 lbs total even at extreme angles. I have little doubt that it will readily handle my DLSR, even with the zoom lens fully extended. One small complaint I wish the panhead handle was about 3 inches longer, but Ill get used to that. They are not; they are of the classical wing nut clamp style as stated in the Amazon description. If you expect to be moving around a lot, these type of clamps, although they give a very secure grip on the legs, are definitely not as fast or convenient as true Quick Release clamps. Another user manual discrepancy states that the panhead includes a Quick Release camera mount; it does not. Again, the Amazon description is correct. This may depend on the Bushnell model. All in all, a well constructed, reasonably light, solid tripod, especially for the price. Hopefully, it will hold up well in extended use. Though I have found

out that there is a threshold where you can activate release and lock in 12 turn. 3.The issue which many PROs can agree is that, it has a single center column on the top of the trilegs which defeats the purpose of tripod. I dont have any idea of atleast one particular component in the assembly. Advice Not best of the lot but you can get better mounts while stretching your budget little over 100.Over the years whilst interested in photography, I recognised the importance of a sturdy tripod, but have always struggled to get that perfect combination of a steady platform, portability, at a reasonable price. This seems to fit those requirements very well. The tripod appears very well made, and has turn screw type clamps to secure the legs.

I read several reviews before making my purchase and this seemed to put some people off. Myself, I love them. Previous tripods that I have owned have had plastic clamps with locking clips, and repeatedly over time these split and render the tripod useless. This is not the lightest tripod to carry around but I have been out bird watching all day and not found it to be an issue, it is nice to have something that you know is not going to blow over in the slightest puff of wind. It does not have a quick release attachment, so photographers may find this a bit off putting, not being able to quickly remove the camera, but for my telescope I find this adds to the security and wobble free characteristics that are so important, as the telescope screws directly to the mount nice and tightly. Previous quick release attachments have always seemed to have had a little play in them. If you are looking for a well made strong tripod I personally feel that you will not get a better one for the price. Sorry, we failed to record your vote. Please try again It is mainly constructed of metals, with very little plastic in evidence. The leg locks are the good old wing nuts, none of that quick release nonsense here, and lock the legs securely. I thoroughly recommend this tripod if you want something solid and dependable, and dont want quick release, go on you know you dont need it! Sorry, we failed to record your vote. Please try again It is quite heavy so wouldnt want to carry it too far. Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote. Visit our website to learn more about the history of the woman suffrage movement. Today's post comes from Michael J. Hancock, an archives technician at the National Archives at College Park, MD. Two American atomic bombs ended World War II in August 1945, and the devastation will be forever remembered. Join us as we commemorate the centennial year of 2020 with 12 stories from our holdings for you to save, print, or share. Today's post comes from Michael J. Hancock, archives technician at the National Archives at College Park, MD. Sometimes a movie can provide a history lesson in its story arc—an event that few in the audience are familiar with. There is perhaps no single figure whose own life and career embodies the promise, success, and continued challenges of civil rights for Black Americans than John Lewis.

In November 1942, following the Allies successful invasion of North Africa, over 51,000 Italian prisoners of war were sent to the United States to POW camps. It would not be Gen. Douglas MacArthur's last act of insubordination. Decades later, his recalcitrance cost him his career. But this time there would be no discernible consequences, at least not for him. Nathaniel Hawthorne, ca. 1862. National Archives Identifier 530280 In addition to being an author, the facialhaired fictionwriter was also a civil servant. National Memorial. This version of the Voyager Sky Tour features a classic refractor design with a 70 mm aperture, appropriate for observing the moon, five planets, and a nice collection of galaxies. The telescope and the handset have no tethered connection; instead, after setting the telescope on level ground and pointing it in the direction of its built-in compass, you enter the date, time, and location to the Sky Tour handset. Knowing the telescope is level and pointing at the proper starting point is all the Sky Tour handset needs based on combining this information with your inputted date, time, and locale, it tells you where to place the controls of the telescope to easily see planets, galaxies and other celestial treats. The mounts altitude and azimuth dials are illuminated in red, helping guide you without diminishing your night-adapted eyesight.
